Electromagnetic shielding is the practice of reducing the electromagnetic field in a space by blocking the field with barriers made of conductive or magnetic materials. Shielding is typically applied to enclosures to isolate electrical devices from their surroundings, and to cables to isolate wires from the environment through which the cable runs.

Electromagnetic compatibility (EMC) is the branch of electrical engineering concerned with the unintentional generation, propagation and reception of electromagnetic energy which may cause unwanted effects such as electromagnetic interference (EMI) or even physical damage in operational equipment. The goal of EMC is the correct operation of different equipment in a common electromagnetic ...

Where safer alternatives to EMF radiation are not possible, one can try shielding, keeping a distance, as well as nutrition, to reduce the impact of the EMF. Below are some options for shielding and protection for wireless frequencies, radio frequencies, electric fields, and magnetic fields. The effectiveness of shielding should be checked with a meter.
