A magnetic field is a vector field that describes the magnetic influence of electrical currents and magnetized materials. In everyday life, the effects of magnetic fields are most readily encountered with nearby permanent magnets, which pull on magnetic materials (such as iron) and attract or repel other magnets. Magnetic fields surround and are created by magnetized material and by moving ...

In a study published March 9 in *The Monthly Notices of the Royal Astronomical Society*, astronomers announced the discovery that all disk galaxies rotate about once every billion years, no matter their size or mass. "It's not Swiss watch precision," said Gerhardt Meurer, an astronomer from the International Centre for Radio Astronomy Research (ICRAR), in a press release.
