Three discoveries challenged this foundation of magnetism, though. First, in 1819, Hans Christian Ørsted discovered that an electric current generates a magnetic field encircling it. Then in 1820, André-Marie Ampère showed that parallel wires with currents attract one another if the currents are in the same direction and repel if they are in opposite directions.

The name hematite is derived from the Greek word for blood $\alpha\eta\mu\alpha$ haima, due to the red coloration found in some varieties of hematite. The color of hematite lends itself to use as a pigment. The English name of the stone is derived from Middle French: *Hématite Pierre*, which was imported from Latin: *Lapis Hæmatites* around the 15th century, which originated from Ancient Greek
